The Nose Cut Out Cup is specifically designed to allow for drinking with minimal head movement.

The nose-cup features an ergonomic cut out that allows the cup to be tipped backwards with no fitments issues around the nose.

It is designed for people who suffer from limited head and neck movement that usually would struggle to reach the bottom of a cup without tipping backwards. The outer plastic of the cup has a matte finish to allow for it to be easily gripped by users further prevents accidents and spillage.
